

AI Prompt Pack for Freelance Web Developers

75 Battle-Tested Prompts to Win Clients,
Write Better Code & Grow Your Business

75 PROMPTS ACROSS 5 CATEGORIES

Created by **Onur CAN**
Full Stack Developer · github.com/onurcando

Table of Contents

Section 1 — Client Communication	15 Prompts
Section 2 — Project Scoping & Proposals	15 Prompts
Section 3 — Code Review & Debugging	15 Prompts
Section 4 — SEO & Content for Client Sites	15 Prompts
Section 5 — Pricing & Negotiation	15 Prompts
How to Use These Prompts	Tips

How to use this pack:

Copy any prompt → replace [BRACKETED PLACEHOLDERS] with your details
→ paste into ChatGPT or Claude → edit the output to match your voice. Each prompt saves you 15–30 minutes of writing time.

Section 1 — CLIENT COMMUNICATION (15 Prompts)

15 prompts · Copy, customize, and use immediately

#1 — First Response to an Inquiry

Act as a professional freelance web developer. A potential client just sent this inquiry: "[PASTE INQUIRY]". Write a confident, warm reply that: confirms you understand their project, asks 2-3 smart clarifying questions, and ends with a clear next step (a call or questionnaire). Keep it under 150 words.

#2 — Following Up on a Proposal

I sent a web development proposal to [CLIENT NAME] on [DATE] and haven't heard back. Write a short, non-pushy follow-up email that: reminds them of the value I offered, acknowledges they're busy, and makes it easy to respond with a simple yes/no/reschedule. Tone: professional but human.

#3 — Handling a Scope Change Request

My client is asking to add [DESCRIBE FEATURE] to the project, which was not in our original agreement. Write a professional email that: acknowledges their request positively, explains this

is outside the current scope, and presents two options – add it for [PRICE] or schedule it for phase 2. Do not sound defensive.

#4 — Delivering Bad News (Delay)

I need to tell my client that the project will be delayed by [X days] because [REASON]. Write an honest, professional email that: takes responsibility, explains what happened briefly, gives a new realistic deadline, and describes what I'm doing to prevent this from happening again. Keep trust intact.

#5 — Asking for Testimonial After Project

I just completed a successful project for [CLIENT NAME]. Write a short, casual email asking them for a testimonial. Include: a specific compliment about working with them, a simple 3-question structure they can fill in (what was the challenge, what did we do, what was the result), and a link placeholder [LINK]. Make it feel effortless for them.

#6 — Setting Boundaries with a Demanding Client

My client keeps messaging me on WhatsApp at all hours and changing requirements constantly. Write a firm but diplomatic email that: establishes communication hours (9am-6pm weekdays), explains the change request process, and reframes this as protecting the quality of their project. Don't apologize.

#7 — Explaining a Technical Decision Simply

I need to explain to a non-technical client why I chose [TECHNOLOGY/APPROACH] instead of what they suggested. Write a clear, jargon-free explanation that uses an everyday analogy, focuses on benefits to them (speed, cost, reliability), and makes them feel their input was considered.

#8 — Onboarding a New Client

I just signed a new web development client. Write a welcome email that covers: what happens in the first week, what I need from them (content, logins, brand assets), how we'll communicate, and what success looks like at the end. Make them feel excited and in safe hands.

#9 — Handling a Complaint

My client is unhappy because [DESCRIBE COMPLAINT]. Write a response that: validates their frustration without admitting legal fault, clearly states what I will do to fix it and by when, and ends on a forward-looking note. Tone: calm, professional, solution-focused.

#10 — End of Project Handover

I'm handing over a completed website to [CLIENT NAME]. Write a handover email that includes: a summary of what was built, links to the live site + staging, login credentials placeholder [CREDS],

a brief guide on how to make basic updates, and how to contact me for future support. Friendly and clear.

#11 — Upselling Maintenance Package

I just launched a website for a client. Write a short email pitching a monthly maintenance retainer (\$[PRICE]/month). Focus on: what could go wrong without maintenance (hacks, outdated plugins, downtime), what's included, and make the ROI obvious. No pressure, just value.

#12 — Reconnecting with Past Client

I worked with [CLIENT NAME] about [X months] ago. Write a short re-engagement email that: mentions a specific thing from our project, shares one relevant update or new service I offer, and opens the door for a new conversation. Don't be salesy – be genuinely helpful.

#13 — Declining a Project Gracefully

I need to decline a project from [CLIENT] because [REASON – budget too low / not my niche / fully booked]. Write a polite decline that: thanks them, explains briefly (without over-explaining), and if appropriate, refers them to someone else or a resource. Leave the door open for future work.

#14 — Getting Client to Approve and Pay

My client has been sitting on the final approval and invoice for [X days]. Write a gentle but clear nudge email that: summarizes what's waiting for their approval, explains the impact of delay on the launch timeline, and makes the payment/approval action as simple as possible.

#15 — Post-Launch Check-in (30 days)

It's been 30 days since I launched [CLIENT]'s website. Write a check-in email that: asks how the site is performing, offers one proactive suggestion based on [THEIR INDUSTRY], and gently introduces the possibility of phase 2 work. Tone: consultant, not salesperson.

Section 2 — PROJECT SCOPING & PROPOSALS (15 Prompts)

15 prompts · Copy, customize, and use immediately

#16 — Discovery Call Questions

I have a discovery call with a potential client who needs [TYPE OF WEBSITE]. Generate 10 smart discovery questions that uncover: their real goal (not just what they said), their budget range indirectly, their timeline, who the decision makers are, and any red flags. Make me sound like a consultant, not an order taker.

#17 — Writing a Winning Proposal

Write a professional web development proposal for [CLIENT NAME] who needs [PROJECT DESCRIPTION]. Include: executive summary, what's included (scope), what's NOT included, timeline with phases, pricing ([YOUR PRICE]), payment terms (50% upfront), and a clear call to action. Make it feel premium and personalized.

#18 — Pricing a Project

I need to price a [TYPE] website project. The client wants [LIST OF FEATURES]. My hourly rate is \$[RATE]. Help me: estimate hours per feature, add a 20% buffer for revisions and communication,

suggest a fixed project price, and explain how to present this price confidently without apology.

#19 — Scope of Work Document

Write a detailed Scope of Work document for a [TYPE] website project. Client: [NAME]. Include: project overview, deliverables (itemized), what the client must provide, number of revision rounds, timeline, out-of-scope items, and acceptance criteria. Make it legally clear but readable.

#20 — Breaking Down a Project Into Phases

My client has a large project: [DESCRIBE]. Their budget is [AMOUNT] but the full project would cost [AMOUNT]. Help me break this into 3 phases, starting with the highest-value core features, so we can start immediately within budget and add phases later. Format as a clear phased roadmap.

#21 — Estimating Timeline

I need to give a realistic timeline for: [LIST PROJECT TASKS]. I work [X hours/week] on this project. Factor in: client feedback rounds (3 days each), testing, unexpected bugs (add 20% buffer), and a launch checklist. Create a week-by-week timeline I can share with the client.

#22 — Identifying Red Flag Clients

Analyze this client inquiry for red flags: "[PASTE INQUIRY]". Look for signs of: unrealistic budget expectations, scope creep potential, unclear decision-making, rushing without proper planning, or disrespect for professional process. Give me a red/yellow/green assessment with reasoning.

#23 — Creating a Project Brief Template

Create a project brief template I can send to new clients before our discovery call. It should collect: business overview, project goals, target audience, competitor sites they like/dislike, features needed, content readiness, timeline, and budget range. Make it feel easy to fill out, not like a form.

#24 — Responding to "What's Your Rate?"

A potential client asked "what's your rate?" before I know anything about their project. Write a response that: explains why I don't quote rates in isolation, redirects to understanding their project first, and positions me as a value-driven consultant. Don't sound evasive – sound smart.

#25 — Competitor Analysis for Client

Do a mini competitor analysis for my client in [INDUSTRY]. They want a website that stands out. Analyze [COMPETITOR 1], [COMPETITOR 2], [COMPETITOR 3] across: design quality, messaging clarity, CTA effectiveness, mobile experience, and loading speed.

Summarize strengths, weaknesses, and 3 opportunities for my client.

#26 — Technical Specification Document

Write a technical specification for [PROJECT TYPE]. Include: tech stack recommendation with reasoning, hosting requirements, third-party integrations needed, security considerations, performance targets, browser/device support, and maintenance requirements. Write it so both a developer and a non-technical client can understand it.

#27 — Change Request Form

Create a professional Change Request Form template for my freelance web development business. It should capture: description of the change, reason for the change, impact on timeline, impact on budget (estimate), client approval signature line, and date. Keep it one page, clean format.

#28 — Writing a Contract (Key Clauses)

I need to add key protective clauses to my web development contract. Write professional contract language for: payment terms (50% upfront, 50% on launch), late payment fees, kill fee (if client cancels mid-project), intellectual property transfer (only on full payment), revision limits, and liability limitation. Plain English but legally sound.

#29 — Packaging Services as Products

I offer freelance web development services. Help me package them into 3 clear productized offerings (Starter, Growth, Pro) with: fixed deliverables, fixed prices, fixed timelines, and clear differences between tiers. Target: small businesses and startups. Make each tier feel like an obvious choice for a specific buyer.

#30 — Project Kickoff Agenda

Create a 45-minute project kickoff meeting agenda for a new web development project with [CLIENT]. Include: introductions, project goals review, timeline walkthrough, roles and responsibilities, communication plan, content submission deadlines, and Q&A. Make it feel organized and professional.

Section 3 — CODE REVIEW & DEBUGGING (15 Prompts)

15 prompts · Copy, customize, and use immediately

#31 — Code Review Checklist Generation

Generate a code review checklist for a [React/Vue/vanilla JS] web application. Cover: code readability, component structure, performance (unnecessary re-renders, lazy loading), security (XSS, input validation), accessibility (ARIA, keyboard nav), error handling, and test coverage. Format as a checklist I can use before every pull request.

#32 — Explaining a Bug to a Client

I found a bug in [DESCRIBE BUG]. Write a non-technical explanation for my client that: describes what users experienced, what caused it (simple analogy), how I fixed it, and what I did to make sure it won't happen again. Maximum 100 words. No jargon.

#33 — Debugging Approach Prompt

I have a bug in my [language/framework] code: [DESCRIBE SYMPTOM]. Walk me through a systematic debugging approach. Start with the most likely causes based on the symptom, suggest specific things

to console.log or inspect, and help me narrow down the root cause step by step. Don't just guess – reason through it.

#34 — Performance Audit

Review this code/component for performance issues: [PASTE CODE]. Look for: unnecessary re-renders, missing memoization, inefficient loops, blocking operations, large bundle contributions, and unoptimized images or assets. Prioritize issues by impact (high/medium/low) and suggest specific fixes.

#35 — Security Audit

Audit this code for security vulnerabilities: [PASTE CODE]. Check for: SQL injection risks, XSS vulnerabilities, insecure direct object references, missing authentication checks, exposed sensitive data, and CSRF risks. For each issue found, explain the risk and provide the secure version of the code.

#36 — Refactoring Messy Code

Refactor this code to be cleaner and more maintainable: [PASTE CODE]. Goals: reduce duplication, improve naming, separate concerns, add brief comments where logic is non-obvious, and make it easier for another developer to understand in 6 months. Keep the same functionality – don't change behavior.

#37 — Writing Unit Tests

Write unit tests for this function/component: [PASTE CODE]. Use [Jest/Vitest/testing library of choice]. Cover: happy path, edge cases (empty input, null, undefined, max values), and error cases. Make the test names descriptive so they serve as documentation.

#38 — API Integration Debugging

I'm having trouble with this API integration: [DESCRIBE ISSUE + PASTE RELEVANT CODE]. Help me debug by: checking the request format, headers, authentication, response handling, and error catching. Show me how to add proper logging to diagnose the issue, and suggest what the fix likely is.

#39 — CSS Layout Problem Solver

I have a CSS layout problem: [DESCRIBE THE ISSUE + PASTE CSS]. Diagnose what's causing it, explain why it's happening, and give me the corrected CSS with an explanation of each change. Also suggest how to prevent this class of problem in future using modern CSS (flexbox/grid best practices).

#40 — Database Query Optimization

Review this database query for performance: [PASTE QUERY]. Identify: missing indexes, N+1 query problems, unnecessary data fetching, and opportunities to use aggregations instead of application-level processing. Rewrite it as an optimized version and explain each improvement.

#41 — Accessibility Audit

Audit this HTML/JSX for accessibility issues: [PASTE CODE]. Check for: missing alt text, incorrect heading hierarchy, missing ARIA labels, keyboard navigation problems, color contrast issues (describe where to check), and form label associations. Provide the corrected version with explanations.

#42 — Technical Debt Assessment

Review this codebase structure/code sample and assess technical debt: [PASTE CODE OR DESCRIBE STRUCTURE]. Categorize debt as: critical (fix now), important (fix in next sprint), and low priority (track in backlog). For critical items, provide an immediate fix. For others, provide a remediation plan.

#43 — Error Message Diagnosis

I'm seeing this error: "[PASTE ERROR MESSAGE]" in my [framework/environment]. Explain: what this error means in plain English, the 3 most common causes, how to diagnose which cause applies to my situation, and the fix for each cause. Be specific, not generic.

#44 — Code Architecture Review

Review this project structure/architecture: [DESCRIBE OR PASTE STRUCTURE]. Evaluate: separation of concerns, scalability for future features, testability, and potential bottlenecks. Suggest

improvements with specific reasoning. Focus on practical changes I can make without a full rewrite.

#45 — Writing Documentation

Write clear developer documentation for this function/API/component: [PASTE CODE]. Include: purpose, parameters (name, type, description, required/optional), return value, example usage (with real values, not placeholders), and common pitfalls. Format as proper JSDoc or markdown.

Section 4 — SEO & CONTENT FOR CLIENT SITES (15 Prompts)

15 prompts · Copy, customize, and use immediately

#46 — Homepage Copy

Write compelling homepage copy for [BUSINESS NAME], a [TYPE OF BUSINESS] serving [TARGET AUDIENCE]. Include: a headline that states the main benefit (not what they do, but what the customer gets), a subheadline, 3 value proposition points, social proof placeholder, and a primary CTA button text. Tone: [PROFESSIONAL/FRIENDLY/BOLD].

#47 — Meta Title & Description

Write SEO-optimized meta titles and descriptions for these pages on [BUSINESS NAME]'s website: [LIST PAGES]. For each: title under 60 characters, description under 155 characters, include primary keyword naturally, and create a compelling reason to click. Target keyword for homepage: [KEYWORD].

#48 — About Page

Write an About page for [BUSINESS/PERSON NAME]. Key facts: [LIST FACTS — founded, location, mission, team size, notable achievements]. The About page should: build trust, show

personality, focus on the customer (not just the company), and end with a CTA. Length: 200-300 words. Avoid corporate clichés.

#49 — Service Page Copy

Write a service page for [SERVICE NAME] offered by [BUSINESS]. Include: headline focusing on outcome, 3-4 paragraphs explaining the service, who it's for, what the process looks like (3 steps), results clients can expect, and a CTA. Target keyword: [KEYWORD]. Length: 400-500 words.

#50 — Blog Post Outline for SEO

Create an SEO-optimized blog post outline for the keyword "[TARGET KEYWORD]". Include: title (with keyword), meta description, introduction hook, 5-7 H2 sections with H3 subpoints, internal link opportunities, FAQ section (3 questions people actually ask), and a conclusion with CTA. Make it genuinely useful, not keyword-stuffed.

#51 — Local SEO Page

Write a local SEO landing page for [BUSINESS] targeting [CITY/REGION]. Include: location-specific headline, mention of local landmarks or context (naturally), service description with local relevance, local trust signals (years serving the area, local clients), and Google Maps embed placeholder. Target keyword: "[SERVICE] in [CITY]".

#52 — FAQ Section

Create an FAQ section for [BUSINESS/SERVICE PAGE]. Generate 8 questions that: address real objections and concerns, include natural keyword variations, cover pricing (generally), process, timeline, and results. Write answers that are honest, specific, and 50-100 words each. Format for FAQ schema markup.

#53 — Google Business Profile Description

Write a Google Business Profile description for [BUSINESS NAME]. It must: be under 750 characters, include primary keyword in first sentence, describe what makes them unique, mention location and service area, and end with a soft CTA. No links, no special characters.

#54 — Landing Page for Ad Campaign

Write a high-converting landing page for [PRODUCT/SERVICE] targeting [AUDIENCE] via [Google/Facebook/Instagram] ads. Include: attention-grabbing headline that matches ad promise, 3 bullet benefits, social proof section placeholder, objection handler, strong CTA with urgency element, and a secondary CTA for hesitant visitors. Conversion-focused, no distractions.

#55 — Product Description (E-commerce)

Write a product description for [PRODUCT NAME] ([BRIEF SPECS]). Target customer: [DESCRIBE]. Make it: lead with the main benefit

(not feature), tell a micro-story of use, list key specs in scannable bullets, handle the top objection proactively, and end with a purchase trigger. Length: 150-200 words.

#56 — Email Newsletter Template

Create a monthly email newsletter template for [BUSINESS TYPE]. Include sections for: a personal intro/hook (2-3 sentences), main content piece (tip, update, or story), featured product/service (soft sell), client spotlight placeholder, and a PS with one CTA link. Tone: conversational, not corporate. Reusable structure.

#57 — Site Audit Report for Client

I did a website audit for [CLIENT]. Issues found: [LIST ISSUES]. Write a professional audit report that: prioritizes issues by impact (Critical/Important/Nice-to-have), explains each issue in non-technical terms, quantifies the potential impact where possible, and presents a clear recommended action plan. Make it feel like expert advice, not a bug list.

#58 — Testimonial Page Copy

Write the framing copy for a testimonials/social proof page for [BUSINESS]. Include: a headline that makes testimonials feel credible (not generic), an intro paragraph explaining who the clients are, category headers for different client types or results, and a CTA after the testimonials. The testimonials themselves are placeholders [TESTIMONIAL].

#59 — 404 Page Copy

Write copy for a custom 404 page for [BUSINESS NAME]. Make it: on-brand and human (not robotic), briefly acknowledge the error without over-explaining, offer 3 helpful navigation options (homepage, popular pages, search), and include a light touch of personality or humor if appropriate for the brand. Include a clear CTA.

#60 — Case Study Template

Create a case study template for a freelance web developer's portfolio. Structure: client overview (industry, size, challenge), what was wrong before (pain points), what we built (with specific features), results achieved (with metrics placeholders), client quote placeholder, and tech stack used. 400-600 words. Make it feel like a story, not a report.

Section 5 — PRICING & NEGOTIATION (15 Prompts)

15 prompts · Copy, customize, and use immediately

#61 — Responding to "That's Too Expensive"

A client said my proposal of \$[PRICE] is "too expensive." Write a confident response that: doesn't apologize or immediately discount, reframes value vs. cost, asks a diagnostic question to understand their real concern (budget constraint vs. perceived value), and opens a conversation about options. Don't be defensive.

#62 — Raising Your Rates with Existing Clients

I need to raise my rates from \$[OLD RATE] to \$[NEW RATE] for my existing client [NAME]. Write an email that: gives them 30 days notice, explains the reason briefly (increased expertise, market rates, cost of living), emphasizes the continuity of service, and makes it easy to continue working together. Professional and confident.

#63 — Negotiating a Better Deal

A client wants me to do [PROJECT] for \$[THEIR BUDGET], but my price is \$[MY PRICE]. Help me negotiate a win-win outcome.

Generate: 3 counter-offer options (reduce scope, phase the project, add value instead of cutting price), and the exact language to use for each. I want to keep the client and maintain my rates.

#64 — Justifying Your Price

I need to justify charging \$[PRICE] for [SERVICE] to a client who is comparing me to cheaper options. Write talking points that: highlight the ROI of quality work, address the hidden costs of cheaper alternatives, describe what's included in my price (that competitors skip), and position me as the lower-risk choice. Confident, not arrogant.

#65 — Getting Paid Faster

My invoices are consistently paid late. Write an email to [CLIENT] about invoice #[NUMBER] which is [X days] overdue. Tone: firm but professional. Include: the amount due, due date, payment link placeholder, late fee policy (if applicable), and a clear deadline for response. Don't damage the relationship but be clear.

#66 — Upselling During a Project

I'm mid-project with [CLIENT] and I've noticed they would benefit from [ADDITIONAL SERVICE]. Write a message that: brings up the opportunity naturally (not salesy), connects it directly to their business goal, gives a rough price range, and makes it easy to say yes or defer to after launch. Don't interrupt project momentum.

#67 — Creating a Retainer Proposal

Write a retainer proposal for [CLIENT NAME] offering ongoing web development support. Include: what's included each month ([X hours] of development, priority support, monthly report), what's not included, pricing (\$[AMOUNT]/month), payment terms (auto-billing on 1st), minimum commitment (3 months), and how to get started. Make the value of ongoing support obvious.

#68 — Handling a Client Who Wants Free Work

A client asked me to do a "small test project" for free to "see my quality." Write a polite but firm response that: declines the free work, redirects to my existing portfolio as proof of quality, offers a paid discovery session as an alternative, and keeps the door open if they're serious. Don't be apologetic.

#69 — Positioning Against Cheap Competitors

My potential client is considering hiring a developer from a freelance platform for \$5/hour. Help me write a response that: doesn't attack competitors, acknowledges budget is a real concern, explains what they're actually buying when they hire me vs. a cheap option, and helps them make an informed decision. Confident and respectful.

#70 — Writing a Better Invoice

I need to write a professional invoice for [CLIENT] for [PROJECT]. Generate invoice line items that: itemize the work clearly (not just "web development"), show the value of each component, include payment terms (due date, late fees), payment methods accepted, and a brief thank you note. Make it feel premium.

#71 — Anchoring Your Price High

I'm about to present pricing options to a client. Help me use price anchoring: create 3 tiers where the middle option is what I actually want to sell. The tiers are: Basic (\$[LOW]), Professional (\$[TARGET]), Enterprise (\$[HIGH]). Write the descriptions so the Professional option feels like the obvious smart choice.

#72 — Asking for a Referral

A project went really well with [CLIENT]. Write a message asking for referrals that: thanks them specifically (not generically), describes the type of client I'm looking for (so they know who to refer), makes referring easy (gives them language to use), and offers something in return if appropriate. Natural, not transactional.

#73 — Recovering from Underpricing

I quoted \$[PRICE] for a project but it's turning into much more work than expected. Write a mid-project email to my client that: acknowledges what I estimated, explains what changed (without blame), presents the additional cost clearly (\$[AMOUNT] more), and

frames it as transparency rather than a surprise bill. Keep the relationship.

#74 — Productizing a Service for Passive Sales

I currently offer [SERVICE] as a custom freelance service. Help me turn it into a productized offering I can sell without a sales call. Design: a fixed-scope version of the service, a clear deliverable list, a fixed price, a self-serve checkout flow description, and an FAQ that handles the top 5 objections. Make it scalable.

#75 — End-of-Year Rate Card

Create a professional rate card for my freelance web development services that I can send to clients and prospects. Include: service categories (website design, development, maintenance, consulting), pricing structure (project-based and hourly), what's included at each level, turnaround times, and a short bio section. Make it look and feel premium.

How to Use These Prompts

Replace all **[BRACKETED PLACEHOLDERS]** with your specific details before using.

Pro tip: Chain prompts together.

Use #16 (Discovery Questions) → #17 (Proposal) → #28 (Contract) as a complete client acquisition workflow.

Each prompt saves you 15–30 minutes. At 75 prompts, that's **18+ hours of writing time** back in your pocket.
